

# Case Study: Healthcare

## Titan Data Services

Replicate. Restore. Recover.™

Founded in December 2002, the Tulsa Spine & Specialty Hospital specializes in excellence in Surgical Services, Diagnostic Imaging, and Pain Management.

The hospital offers state-of-the art and most advanced MRI, computed tomography and myelography technology available. It is the depth of experience and the abilities of the physicians and nurses at Tulsa Spine & Specialty Hospital that make it the ideal place for “high tech” and “high touch” to unite.

Disaster or loss of data will occur in any information driven business. But for a healthcare provider operating in a paperless environment, mitigating risks for loss of data, delay of data retrieval or hardware outages is even more critical.

Interruptions or loss of business continuity can most often result in non-compliance with federal regulators and worse, may be life-threatening to our patients.

“Knowing our critical data is well protected by Titan provides us peace of mind, and lets us focus on what is most important – our patients’ health.”

*Steve Walker, IT Director  
Tulsa Spine & Specialty Hospital*

To ensure 24/7 secure protection, we partnered with Titan for our disaster recovery and business continuity needs and glad we did.

### **Protecting Your Business is Our Business.**

As your trusted partner, Titan Data Services assists you in developing an extensive business continuity and disaster recovery plan specific to your business.

The most important aspect to storing backup data is the ability to recover that data fast and efficiently. Titan Data Services provides the capability to restore your data quickly so you don't have to worry.

And we give you the flexibility to keep your data stored safely at your place of business or in our secure facility. More importantly, after you've experienced calamity, we can help you get back to operations quickly.

**We're your assurance policy for peace of mind.**
